PROTECTIVE

Il principio secondo cui funziona Protective Glass è semplice: la superficie dei cristalli si presenta ad occhio nudo come perfettamente liscia; a livello microscopico si vede che il vetro presenta delle imperfezioni superficiali. Con il trattamento Protective Glass questi buchi ed imperfezioni vengono chiusi grazie ad una reazione chimica con le molecole superficiali del cristallo. L'applicazione, eseguita prima dell'assemblaggio della cabina, da personale qualificato, conferisce alle superfici di vetro della cabina la proprietà "anti-presa" dell'acqua.

Per mantenere il trattamento nel tempo è necessario seguire alcuni semplici accorgimenti: non utilizzare in nessun caso detergenti eccessivamente acidi o basici o comunque abrasivi; non utilizzare spugne o panni abrasivi; sciacquare con acqua la superficie interna della cabina dai residui di sapone e sporco dopo la doccia; utilizzare il trattamento "kit mantenimento e pulizia" per pulire la cabina doccia e rigenerare il trattamento "anti-presa".

Das Funktionsprinzip von Protective Glass ist einfach: Mit freiem Auge erscheint die Oberfläche der Kristallgläser vollkommen glatt. Unter dem Mikroskop können jedoch Unregelmäßigkeiten der Oberfläche festgestellt werden. Durch die Protective Glass Behandlung werden diese Löcher und Unregelmäßigkeiten dank einer Reaktion Oberflächenmolekülen des Kristalls geschlossen. Mit einem Auftragungssystem wird den Glasoberflächen von Kristalltafelglas-Fachmännern vor dem Zusammenbau der Kabine die "Antiwasserhaftung" verliehen. Ihre Kabine bleibt sauber und die Glasoberflächen behalten ihre natürliche Durchsichtigkeit. Zur besseren Haltbarkeit der Behandlung müssen einige einfache Vorkehrungen getroffen werden: niemals mit sehr säurehaltigen oder basischen Reinigungsmitteln reinigen. Keine kratzenden Schwämme oder Scheuerlappen verwenden. Nach dem Duschen die Seifen- und Schmutzrückstände mit Wasser von den Innenoberflächen der Kabine wegwaschen. Den "Instandhaltungs- und Reinigungskit" zum Reinigen der Duschkabine und zur Wiederherstellung der "Antihaftung" verwenden.

The principle exploited by the Protective Glass system is simple: the glass surface is perfectly smooth to the naked eye, but at a microscopic level the glass shows a few surface imperfections. Thanks to the Protective Glass treatments, these small holes/imperfections are sealed through a chemical reaction with the surface molecules of the glass. Before assembling the cubicle, this treatment is carried out by qualified personnel so as to confer to the glass surface "water-repellent" properties. To maintain this treatment over time, a few simple tactics shall be adopted: never use too much acid or basic (or, in any case, abrasive) detergents; do not use abrasive sponges or rags, rinse the internal surface of the cubicle with water to remove any residues of soap and dirt after the shower, use the "maintenance and cleaning kit" to clean your cubicle.

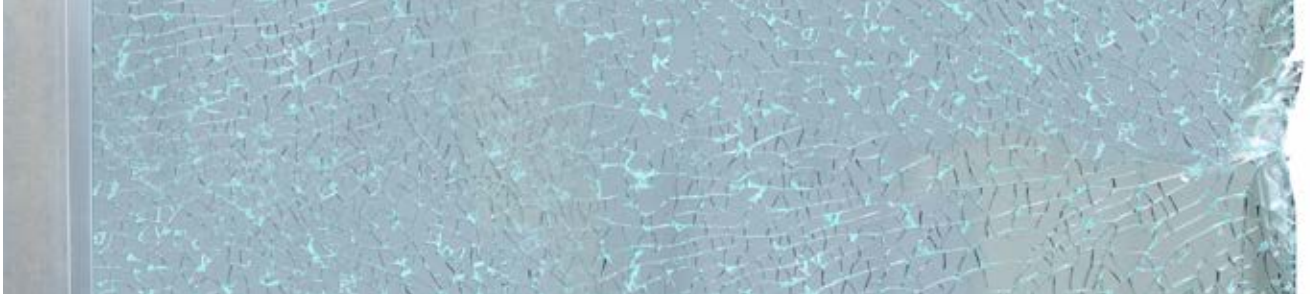

Protective Glass es el tratamiento "anti-adherencia" del agua que impide que el agua quede sobre la superficie del cristal, evitando los depósitos jabonosos y calcáreos. El principio del funcionamiento de Protective Glass es sencillo: la superficie del cristal a simple vista es lisa, pero a nivel microscópico se aprecian poros e irregularidades. Con el tratamiento Protective Glass estas imperfecciones quedan cerradas gracias a una reacción química con las moléculas del cristal. Con un sistema de aplicación, previo el ensamblaje de la mampara, por personal cualificado sobre la placa de cristal, se consigue la propiedad de "anti-adherencia" de agua. Vuestra mampara queda como nueva y el cristal mantiene la transparencia natural. Para el tratamiento es necesario seguir estos simples consejos: no usar en ningún caso detergentes excesivamente ácidos o básicos, y en general ningún producto abrasivo; aclarar con agua la superficie interna de la mampara de los residuos de jabón y espuma después de la ducha; utilizar el tratamiento "kit de mantenimiento y limpieza" para limpiar la mampara de ducha y regenerar el tratamiento "anti-adherencia" de agua.

Protective Glass est un traitement qu'il empêche à l'eau de stagner sur les surfaces en verre, en laissant dépôts savonneux et calcaires. Le début selon lequel il fonctionne est simple: la surface des cristaux se présente à l'œil nu comme parfaitement lisse; au microscope on voit que le verre présente des imperfections superficielles. Avec le traitement Protective Glass ces trous et imperfections viennent fermés, merci à une réaction chimique avec les molécules superficielles du cristal. Avec un système d'application, exécuté sur les cristaux avant de l'assemblage de la cabine par du personnel qualifié, on confère aux surfaces de verre la propriété "anti-poise" de l'eau. Votre cabine douche résulte propre et les surfaces en verre maintiennent leur transparence naturelle. Pour maintenir le traitement dans le temps il est nécessaire de suivre quelques simples perspectives: ne pas utiliser en aucun cas excessivement détergents acides ou basiques ou de toute façon abrasifs; ne pas utiliser de d'éponges ou tu crèmes abrasif; rincer avec de l'eau la surface intérieure de la cabine dépôts savonneux et saleté après la douche; utiliser le traitement "kit d'entretien et propreté" pour nettoyer la cabine douche et régénérer le traitement Protective Glass.

O princípio explorado pelo sistema de protecção do vidro é simples: a superfície do vidro é perfeitamente lisa a olho nu, mas a um nível microscópico o vidro mostra algumas imperfeições superficiais. Com o tratamento da protecção do vidro, essas pequenas imperfeições são seladas através de uma reação química com as moléculas da superfície do vidro. Esta aplicação é realizada por profissionais qualificados e feita antes da montagem do produto e confere propriedades "repelente de água" ao vidro.

Para manter este tratamento ao longo do tempo, alguma táticas simples devem ser seguidas: nunca usar demasiado detergente ácido ou básico (nem abrasivo); não usar esponjas ou panos ásperos, após utilização enxaguar com água de modo a retirar resíduos de sabão, utilizar o kit de "limpeza e manutenção" para limpar a sua cabine de duche.

TECNOVETRO

Un concentrato di tecnologia che rende il vetro un tecnovetro, in conformità con la norma UNI EN12600 e 12150. Come da normativa UNI EN14428:2015 il vetro di una cabina doccia deve essere temperato, quindi con standard di frammentazione definiti. Il vetro temperato quando va incontro a rottura forma frammenti molto piccoli che risultano non pericolosi per le persone. Il tecnovetro è un vetro temperato ricoperto di una membrana di spessore 100 micron che controlla la frammentazione del vetro in caso di rottura, limitando i possibili danni all'ambiente circostante.

A concentrate of technology that makes the glass a "Tecno glass", in accordance with the standard UNI EN12600 and 11250. As UNI EN14428 : 2015 defines, the glass of a shower must be tempered, so with a defined standard fragmentation. When the tempered glass undergoes breakage, it forms very small fragments which are not dangerous for people. Tecnovetro is a tempered glass coated with a membrane thick 100 microns which controls the fragmentation of glass in case of breakage, limiting the possible damage to the surrounding environment.

Un concentrado de tecnología que hace el vidrio un "Tecno-vidrio", de conformidad con la norma EN 12600 y 12150 . Cómo UNI EN14428 : 2015, el cristal de la ducha debe ser templado, y con las normas definidas de fragmentación. Así que cuando el vidrio templado se somete a la ruptura, forma fragmentos muy pequeños que no son peligrosos para las personas . El Tecnovetro es un vidrio templado recubierto con una membrana de espesor de 100 micrómetros, que controla la fragmentación del vidrio en caso de rotura, lo que limita el posible daño al medio ambiente circundante.

Um concentrado de tecnologia que faz do vidro um "vidro Tecno", de acordo com as normas UNI EN12600 e 11250. Como a UNI EN14428: 2015 define, o vidro de uma cabine deve ser temperado, então que seja com um standard de fragmentação definida. Quando um vidro temperado quebrar, forma fragmentos muito pequenos que não são perigosos para as pessoas. O Tecnovetro é um vidro temperado revestido com uma membrana de espessura de 100 microns que controla a fragmentação do vidro em caso de quebra, limitando o possível dano ao ambiente circundante.

Un concentré de technologie qui rend le verre un « Tecno-verre », conformément à la norme UNI EN12600 et 12150. Comme UNI EN14428 : 2015, le verre d'une douche doit être tempéré , de sorte à fragmentation norme définie. Alors, quand le verre trempé subit une rupture , former de très petits fragments qui ne sont pas dangereux pour les personnes . Le Tecnovetro est un verre trempé revêtu d' une épaisseur de membrane de 100 microns qui commande la fragmentation de verre en cas de bris , ce qui limite les dommages possibles pour le milieu environnant..

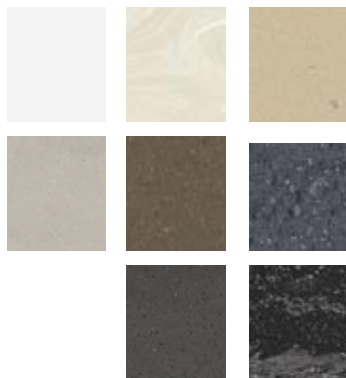

Ein Konzentrat von Technologie, die das Glas eine „Tecno-glas“, in Übereinstimmung mit der UNI EN12600 und 12150 macht . Als UNI EN14428: 2015 das Glas von einer Dusche muss vergütet, so werden mit Standard- Fragmentierung definiert. Also, wenn das Glas Bruch erfährt, bilden sich sehr kleine Fragmente, die nicht für den Menschen gefährlich . Die Tecnovetro ist ein Glas mit einer Membrandicke von 100 Mikron , die die Fragmentierung von Glas bei Bruch steuert , wodurch die mögliche Schäden an der Umgebung beschichtet.

CARATTERISTICHE - FEATURES - CARACTERISTICAS - CARACTERISTICAS - CARACTÉRISTIQUES - FEATURES:

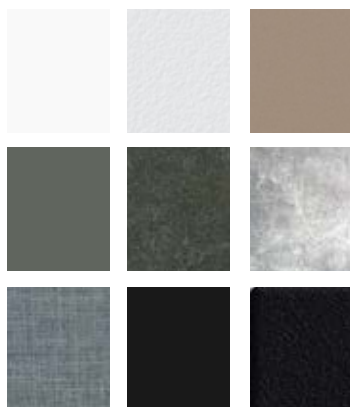

- **Eccellente trasparenza** - Excellent transparency - Excelente transparencia - Transparencia excelente- Excellente transparence - Ausgezeichnete Transparenz
- **Eccellente resistenza a graffi e abrasioni** - Excellent resistance to scratches and abrasions - Excellente résistance aux rayures et à l'abrasion - Hervorragende Beständigkeit gegen Kratzer und Abschürfungen - Excelente resistencia a los arañazos y abrasiones - Excelente resistencia a riscos e abrasivos
- **Ottima resistenza al calore** - Excellent resistance to heat - Excelente resistencia al calor - Excelente resistencia ao calor - Excellente résistance à la chaleur - Hervorragende Beständigkeit gegen Hitze.

È possibile comporre la propria soluzione doccia scegliendo forma, tipo di apertura, finiture e misure; la configurazione ottenuta è completa di codici e immagine da condividere e preventivare.

You can design your own shower solution by choosing the shape, type of opening, finishes and sizes; the configured layout is then complete with codes and a picture that you can share and plan for.

Sin la necesidad de solicitar códigos de acceso, puede conectarse al almacén central Megius en cualquier momento, con la disponibilidad real actualiza cada 30 segundos, y la búsqueda de los elementos que se requieren: búsquedas se pueden realizar usando los códigos de producto o dimensiones.

É possível criar a sua própria solução de duche escolhendo a forma, tipo de abertura, acessórios e medidas; o layout obtido vem completo com códigos e imagens e pode ser compartilhado.

Il est possible de composer sa solution de douche en choisissant sa forme, son type d'ouverture, ses finitions et ses dimensions. La configuration obtenue avec ses codes et ses images est prête pour l'établissement d'un devis.

Es ist möglich, die eigene Duschcabine-Lösung durch Auswahl der Form, Öffnungsart, Finishs und Abmessungen selbst zusammenzustellen; die erhaltene Konfiguration umfasst die Artikelnummern und die bildliche Darstellung zur Weiterleitung und Erstellung eines Kostenvoranschlags.
